**TOTAL: 59**

**TOTAL CALLS FOR SERVICE THROUGH ENFORCEMENT DISPATCH CENTER: 2,574**

**FISHING THE TIDES (from page 20)**

Many offshore anglers believe that the periods just before a full moon tend to be the most productive due to stronger tides and currents that result from the increased gravitational pull.

- When offshore fishing you will often find pelagic game fish, such as sailfish or dolphinfish, swimming along with the current in search of prey. Try to position your boat to drift along with current that is created by the moving tide and winds so that you can reel your uptide fishing rigs back with the current or tidal flow.

- If you are deep sea fishing for cod, haddock, etc. during a moving tide, you can try trolling a jig with a simple downrigger. Trolling is a good option when the tidal movement or current might prevent you from properly positioning your baits over structure.

Whether you plan to fish inshore or offshore on your next saltwater trip, use these tips to learn more about how to fish tides and see what a difference they make in the amount of fish you catch.
